

HESTRA

RANGE BOOK
2023

Hands have been coming first since 1936

GENERATIONS OF A FAMILY-OWNED BUSINESS

Hands come first at Hestra. For 80 years, we have been developing gloves that provide warmth, protection and fingertip sensitivity in the most varied conditions. Today, our range comprises more than 400 styles. It may sound a lot, but people and hands are different. That's why different gloves are needed. Everything that we do today has grown out of the timber forests of the uplands in the Swedish province of Småland. That is where Martin Magnusson and his family settled and where he began making gloves in 1936. Magnusson set up his workshop in a farmhouse and started making gloves for the local lumberjacks. In 1937, a ski slope was created nearby and as its popularity grew, Magnusson saw a new market for his high quality, durable gloves. His sons, Lars-Olof and Göte, became keen skiers and started working in the family business in their teens.

Over the years, the word about our gloves spread to places beyond the village that gave us our name. Sweden was becoming a nation of enthusiastic skiers and the sport's popularity grew in the 1960s. With their avid interest in skiing, Lars-Olof, Göte and their brother-in-law Lennart made sure that Hestra jumped on the bandwagon.

Since then, two more generations of the Magnusson family have entered the company; Svante and Claes, who grew up among skis and gloves, and now their sons, Niklas, Anton and Jonas too. Today, Hestra has a presence in over 25 countries and, although we now have four factories and manufacture gloves for sports, fashion and professional uses, nothing has really changed.

The focus remains on hands and gloves. And Hestra is still our home.

1

1

OUTSIDE THE FACTORY

Göte and Martin outside the factory one morning in the 1950s before setting off to visit customers. The cars in the photo are Citroën Berliners.

2

GLOVES FOR WORKING IN THE FORESTS

The first gloves were produced for local lumberjacks. The gloves were made of leather and wool and reinforced with rivets to withstand the wear and tear of forestry work. Leather and wool are still our favourite materials.

3

THE GENERATIONS

Svante and Claes from the third generation, and their sons Niklas, Anton and Jonas from the fourth generation.

2

5

1

HESTRA - SINCE 1936
Our biggest source of inspiration is still the forests around Hestra, Sweden.

4

QUALITY IN EVERY STEP
Anton Magnusson controlling leather before sending to the factories.

2

CONCEPT STORES
2008 and 2014 we opened two concept stores; one in Stockholm, Sweden and one in Oslo, Norway. 2021 we opened two more, one in Copenhagen, Denmark and one in Gothenburg, Sweden. All four stores are located in the city center and offer a wide selection of our dress gloves and sport gloves.

5

WHAT IS EGEN KRAFT?
In 2010, around 30 local companies teamed up to form a co-operative to invest in wind power. Today the entity holds stakes in three wind parks across southern Sweden, and in recent years, the co-op has facilitated the installation of solar panels at some of the partner companies' sites.

3

ARMY LEATHER HELI SKI
One of our most famous glove styles, Army Leather Heli Ski, under production in our Hungarian factory.

6

REPLACEABLE LINERS
Replaceable liners enable customers to adapt their glove to multiple activities, can be washed, repaired and be replaced easily. This extends the life of the outer shell glove too.

6

LEATHER GUIDE

Leather is a natural, living material. It is a by-product of the meat industry and one of our oldest materials for clothing. It is beautiful, supple and provides a comfortable fit. Some leathers withstand moisture well, while others are softer.

The characteristics of leather are partly a result of where the animal lived. We select our leather with great care and work closely with the tanneries. Since we have been working with leather since 1936, we have a good network of quality-conscious suppliers. As you'll notice when you pull on a pair of our gloves.

Many of our gloves are made of leather without dyes. For our coloured gloves, we only use drum dyed leather. This requires a better quality raw material than when dyeing the surface, but means that the leather retains its natural appearance and characteristics. Depending on the intended purpose of the gloves, we choose nappa, suede or split. Nappa is more moisture-resistant and is therefore used for most of our ski gloves.

GLOVE CARE:

1. Dry your gloves at room temperature. High temperatures may dry out and damage the leather.
2. Grease the leather regularly and it will resist moisture, wear and tear better.
3. Leather gloves should not be washed too frequently, as this removes the natural protective properties of the leather.

4. If your gloves have a ventilating moisture barrier, such as Gore-Tex, you should not use waterproofing agents that contain silicone.

5. If dyed leather becomes wet, the dye may bleed onto your ski jacket.

WARNING!
WATCH OUT FOR METAL EDGES AND OTHER SHARP OBJECTS WHEN YOU'RE HANDLING EQUIPMENT.

ARMY LEATHER

Army Leather is our most durable leather, originally used to make gloves for military purposes. A specially treated goat leather that withstands tough, outdoor conditions. The leather is thoroughly waterproofed and its structural properties provide effective protection against moisture. We source our goat leather from Pakistan and Indonesia.

WEAR-RESISTANT | WATERPROOFED | GOATSKIN

COWHIDE

Cowhide is a durable leather with good impregnation properties. It takes on beautiful nuances in colour when dyed and resists moisture and abrasion well. It is therefore widely used for many of our ski gloves. We source our leather from New Zealand and Germany.

WEAR-RESISTANT | WATERPROOFED | COWHIDE

ELK LEATHER

Elk leather is a soft, rich leather with good insulating properties and a fine textured surface. Although it's a durable leather, it has a slightly sensitive surface and is therefore only used in our Sport Classic collection. We use elk calfskin from Sweden and Finland, where the climate produces the best quality hides.

INSULATING | SOFT | BEAUTIFUL TEXTURE

DEERSKIN

North American white tail deerskin produces a wonderfully soft and warm leather. It is porous, just like elkskin, and the air that becomes bound up inside the leather means it insulates well too. We use deerskin for the gloves in our Sport Classic collection.

INSULATING | SOFT | BEAUTIFUL TEXTURE

ECOCUIR®

Ecocuir® is a trademark-protected cowhide that is tanned without the use of chrome or synthetic dyes. The leather is saturated with grease to repel moisture. Its beautiful natural colour develops a lovely patina over time. Our Ecocuir cowhide originates from France.

CHROME-FREE | COWHIDE | NATURAL COLOUR

HESTRA GLOVE SYSTEM

WARMS THE HANDS LAYER BY LAYER

You can keep your hands dry and warm by combining gloves with different features. This is how you can layer and vary your gloves to adjust to changing temperatures and your activity levels.

I

INNER GLOVE LAYER 1

The liner is the hand's underwear, which transports moisture away from the skin and creates an additional warming layer. You should keep it on to avoid contact with cold surfaces when performing tasks that require finger dexterity.

II

BASE GLOVE LAYER 2

The base glove is the one you use most frequently. It keeps your hands warm in normal cold conditions, wicks away the moisture and provides protection from the wind. The base glove is available with a fixed or removable liner. A removable liner makes it easier to regulate the heat.

III

SHELL GLOVE LAYER 3

Shell Gloves are a layer of added protection that you pull on when it's biting cold, wet or if you're standing still for prolonged periods. Shell Gloves should be generous enough to leave room for a large volume of insulating air.

HEART BEFORE HANDS

Hands and feet are the first body parts to suffer when you are out in the cold. They are furthest from the vitals in the core of your body - your heart, brain, spinal cord and gastrointestinal tract. The fine mesh of capillaries in the fingers and toes is shut off when it gets too cold and the tips of your fingers turn white. You could say that the body "sacrifices" less important parts in an attempt to save the organs that are essential for survival. The point of this is that your hands and feet need extra protection when it's cold to compensate for the body's natural function.

Remember that even if your body is warm in general, your hands can still get frostbite.

I

INNER GLOVE LAYER 1

1. WICKS AWAY MOISTURE
2. INCREASES THE INSULATION BY ABOUT 20%
3. CREATES A WARMING LAYER OF AIR

MERINO WOOL LINER ACTIVE
ART. NO. 34110-390

27,50€

II

BASE GLOVE LAYER 2

1. RETAINS THE HEAT IN NORMAL COLD CONDITIONS
2. PROTECTS AGAINST WIND, RAIN AND SNOW
3. PROVIDES BETTER FINGERTIP SENSITIVITY

ERGO GRIP ACTIVE WOOL TERRY
ART. NO. 31190-861100

90,30€

III

SHELL GLOVE LAYER 3

1. PROTECTS AGAINST EXTREME COLD
2. CREATES A WARMING LAYER OF AIR
3. INCREASES THE INSULATION BY ABOUT 50% TOGETHER WITH THE LINER.
4. PROTECTS AGAINST WIND AND SNOW.

ALPINE PRO

Styles developed for freeriders, professional mountain guides, ski instructors and others who place high demands on function, fit and durability.

ALPINE RACING

Gloves developed specifically for alpine racers. Supple and close fitting gloves equipped with impact protection.

ALPINE

A wide range of gloves and mittens developed with the recreational skier in mind. Supple and warm styles as well as styles with a women's specific fit.

JUNIOR

Kid's gloves and mittens for all ages, from infants to young teenagers. Wide range of styles for various use and temperatures.

OUTDOOR

All you need in gloves for your outdoor adventures such as ski touring, hiking, kayaking and running.

MOUNTAINEERING

Highly functional styles for all year use in the mountains. Designed with particular attention to climbers' requirements for durability, grip, warmth and protection.

CROSS COUNTRY

Gloves designed for both track skiing and ski touring, for elite athletes as well as recreational skiers.

MTB / BIKE

A collection of gloves that provide a good grip and protection from weather, wind and impacts.

LINERS

Wide selection of liners for increased warmth and flexibility in varying temperatures and weather conditions.

SPORT CLASSIC

Our collection of exclusive and casual gloves with both classic and contemporary designs for everyday use.

ACCESSORIES

Our Hestra glove accessories are made to ensure that you can enjoy your gloves longer and improve the functionality, durability and feel even longer.

ALPINE PRO

Alpine Pro gloves are used by freeriders, mountain guides, ski instructors and others who place high demands on their equipment. Those who ski a lot in varied terrain and weather will find the right glove in this category. These are highly functional gloves that stand up to heavy wear and tear, and provide great grip.

JUNIOR

When we design gloves within junior – for children and teenagers – we set the same high standards that we do with the adult models. Even small hands need gloves that can withstand cold temperatures, snow and rain – sometimes to an even higher degree. Materials, functions and features like handcuffs and reflectors – we produce everything with the same care.

MOUNTAINEERING

Our mountaineering collection consists of highly functional gloves that live up to climbers' tough demands for unrestricted feeling and durability, year round. Several of the warmer models have detachable liners that can be washed and replaced. This means that these gloves can be adapted to varying weather conditions and uses.

Measure your hand

Two things to consider regarding size and measurement of the hand:

- Circumference of the hand
- Length of the hand

The hand's circumference is measured with a tape measure 20 mm above the thumb (see illustration).

The length of the hand is the distance between the wrist and the tip of the middle finger.

Measure the hand's circumference and the length of the hand.

The length of the hand is the same as the distance between the wrist and the tip of the middle finger.

One pair of gloves in numbers

109 parts, 46 manufacturing steps, 18 quality check-points. Production time of 1 hour and 27 minutes.

GLOSSARY

TEXTILES

Cordura® Stretch Extra durable nylon fabric with good stretch properties that provide a good fit. A breathable fabric that is wind and waterproof.

Dobby Melange Durable, wind/ waterproof/ breathable woven fabric. The composition 97% Polyester/ 3% Spandex provides good stretch properties. DWR in fluoro-carbon-free Rudolph Bionic Eco Finish.

Flextron Softshell 4-way stretch Durable and supple stretch fabric made of polyamide/ spandex. Wind and water resistant with good ventilation properties. DWR in fluoro-carbon-free Rudolph Bionic Eco Finish

GORE WINDSTOPPER® Softshell windproof and water resistant stretch fabric with excellent breathability characteristics.

Micron Wind and waterproof, soft polyester fabric with good breathability characteristics. DWR in fluoro-carbon-free Rudolph Bionic Eco Finish

Mistral Wind and waterproof 3-layer knitted fabric with 4-way stretch made from 87% nylon and 13% spandex. Durable, soft and with good ventilation properties. DWR in fluorocarbon-free Rudolph Bionic Eco Finish.

Neoprene® Textile coated synthetic rubber that is weather-resistant and insulates well, even when wet.

Proton Durable nylon fabric that is windproof, waterproof and has good breathability characteristics. DWR in fluoro-carbon-free Rudolph Bionic Eco Finish

Canvas Sturdy, close-weave, thin-shaft fabric made from twined polyester/cotton yarn.

Triton A durable nylon fabric that is wind and waterproof and has excellent breathability properties. DWR in fluoro-carbon-free Rudolph Bionic Eco Finish

Waxed Canvas Sturdy, close-weave, thin-shaft fabric made from twined 60 % cotton and 40 % polyester wax finish.

Niak Wind and waterproof, soft polyester fabric with good breathability characteristics. DWR in fluoro-carbon-free Rudolph Bionic Eco Finish

LEATHER

Army Leather Army Leather is our most durable leather, originally used to make gloves for military purposes. A specially treated goatskin that withstands tough, outdoor conditions. The leather is thoroughly waterproofed and its structural properties provide effective protection against moisture.

Cowhide Cowhide is a durable leather with good impregnation properties. It takes on beautiful nuances in colour when dyed and resists moisture and abrasion well. It is therefore widely used for many of our ski gloves.

Ecocuir® is a trademark-protected cowhide that

is tanned without the use of chrome or synthetic dyes. The leather is saturated with grease to repel moisture. Its beautiful natural colour develops a lovely patina over time as the gloves are used.

Elkskin Elkskin is a soft, rich leather with good insulating properties and a fine textured surface. Although it's a durable leather, it has a slightly sensitive surface and is therefore only used in our Sport Classic collection. We use elk calfskin from Sweden and Finland, where the climate produces the best quality hides.

Deerskin North American white tail deerskin produces a wonderfully soft and warm leather. It is porous, just like elkskin, and the air that becomes bound up inside the leather means it insulates well too. We use deerskin for the gloves in our Sport Classic collection.

LINING

GORE-TEX INFINIUM™ WINDSTOPPER® Dry Touch Windproof and high-wicking lining with excellent breathability characteristics. Particularly suitable for high-intensity activities like cross country skiing.

Bemberg Soft and warm polyamide fabric.

Fleece Airy and napped material made of polyamide or polyester. Retains heat well, carries away moisture and dries quickly.

Felted wool/wool terry cloth/cashmere Wool keeps hands warm even when the material becomes wet. Felting means that the wool has been washed with soapy water to be extra warm, dense and durable.

Merino Wool The wool from merino sheep has a very fine fibre structure which gives a soft and comfortable feeling.

ZQ Merino ensures environmental, social and economic sustainability and safeguards animal welfare.

Polartec Power Dry/Power Stretch Thin, moisture-wicking liner with good breathability.

Silk 100% natural silk.

Wool Terry A knitted material with curly fibers and terry loops that can trap large amounts of air-up to 80%.

INSERT

CZone® A glove with four different layers-outer material, waterproof and breathable insert, insulation and lining, which complement each other and creates a warm and pleasant comfort zone for your hands.

CZone Contact Gloves with waterproof and breathable function where the shell, insert and lining is bonded together to create improved fit and dexterity.

CZone Tactile Gloves with waterproof and breathable function where the shell and insert is laminated to create improved grip and dexterity.

GORE-TEX A thin PTFE insert that lets out excess body heat and moisture, while preventing water from getting in. The material is wind and waterproof.

DESIGNS

Eagle Grip® A design where we shape or pre-curve the gloves so that they follow the natural curve of your hands, giving a closer, more comfortable grip.

Leather welt An extra piece of leather that protects and strengthens the seam around the glove's thumb.

External seams Sewing technology that we use for several models. It provides excellent comfort for the fingers.

Piqué seam Stitching performed when the material is wrapped around, providing an extra supple fit.

Snow lock Keeps snow on the outside and warmth on the inside.

Vertical Cut® A special design used in some of our Alpine Racing gloves for the best possible fit.

Wolf Paw® A patented fingertip reinforcement design that eliminates seams from surfaces that are exposed to the most wear and tear.

Ergo Grip® It is a patented design that makes it possible to sew gloves with different levels of pre-curved fingers for optimal grip. Ergo Grip makes a very close fit on the palm, with minimal excess material.

INSULATION

Fiberfill An insulating material made from polyester fiber.

G-Loft is a very thin polyester fiber with exceptionally high insulating capacity, even in wet conditions. G-loft is quick drying, ventilated, very compressive and easy to wash.

Primaloft® Soft, down-like polyester that is warm, breathable and water resistant.

Thermolite® Polyester-based thin and supple insulation. Retains its insulating properties even when wet.

Swisswool® Swisswool is made from 88% wool from Swiss sheep. The other 12% is corn starch.

OTHER

Chamude A durable micro fiber material.

PU Digital/PU Power Grip Soft but durable textured material made of polyurethane.

Nor Grip A pattern coating printed on the palm for a better grip.

3M Scotchlite A reflective material from 3M.

Coating A coating on the fabric that gives the material various properties depending on which coating you use.

Rudolf Bionic Finish Eco A fluorine-free water-repellent textile finish agent (DWR). Bionic Finish Eco replaces the use of fluorocarbons that are toxic and bio-accumulative in the environment. We have been using this DWR finish in most of our styles and fabrics since 2013.
